

SPIDXR

Simplify Life. Amplify Time.

The Urban Super-App for Intelligent Living

SPIDXR

Vision & Mission

Our Vision

To be the intelligence layer that powers every residential building globally - creating autonomous, adaptive living environments.

Our Mission

Build AI-native infrastructure that turns every building into an intelligent service platform — automating operations, elevating experiences.

The Urban Problem

Buildings are managed manually in an automated world

Despite billions spent on proptech, residential operators still rely on fragmented tools, manual workflows, and disconnected service networks — resulting in inefficiency and poor resident experiences.

78%

of property operators still use manual request management systems

£3.5B

annual UK residential service transaction slack AI optimization

20+

apps for 5 core needs creates decision fatigue for residents

\$
240

monthly lost NOI per-unit from operational inefficiency

The Shift

From space to experience

Old Paradigm

Buildings as physical containers
Manual service coordination
Reactive maintenance
Disconnected resident apps

New Paradigm

Buildings as intelligent platforms
AI-automated service routing
Predictive operations
Unified experience layer

The winners in PropTech 2.0 will be infrastructure providers – not app developers

The SPIDXR Solution

One AI core. Infinite service automation.

SPIDXR is the AI infrastructure layer that connects building systems, service networks, and resident interfaces — turning every property into an intelligent, automated service platform.

First unified AI operations platform for UK residential buildings

1

AI Concierge Core

*LLM-powered decision engine
with behavior modeling*

2

Service API Mesh

*Integrates vendors, bookings,
deliveries, and local services*

3

Operator Console

Real-time oversight and human-in-the-loop quality assurance

4

Data Intelligence

Behavioral insights and predictive analytics layers

How It Works

AI-first automation with human oversight

1

Request

Resident makes a natural language request via chat, voice, or app

2

Route

AI core analyzes intent, context, and resident history to route intelligently

3

Execute

Task automated via service API or escalated to human concierge

4

Learn

System learns from every interaction to improve accuracy over time

Every interaction creates proprietary behavioural data - building an unscalable competitive moat

Market Opportunity

UK residential AI concierge services

Total Addressable Market

£44M

Annual Recurring Revenue

Market Breakdown

BTR/Co-living:	£18.4M
Student Housing:	£9.2M
Premium Apartments:	£12.3M
Retirement Living:	£4.1M

Business Model

Multi-revenue stream SaaS + marketplace

Revenue Stream	Model	Margin
Platform License	£5-15/unit/month (tiered pricing)	85%
Service Transactions	12-18% commission on bookings	70%
Data & Insights	£1,200-3,000/building/year	92%
White-Label API	Usage-based pricing for developers	88%

Pricing Architecture

Flexible tiers for every building type

Lightning

£5

/unit/month

- AI chat concierge
- Basic request routing
- Resident mobile app
- Email support

Essential

£9

/unit/month

- Everything in Lightning
- Service marketplace
- Operator dashboard
- Basic analytics

Professional

£15

/unit/month

- Everything in Essential
- Advanced AI routing
- Behavioral insights
- API access
- Priority support

BTR Operator

Custom

enterprise pricing

- Everything in Professional
- Multi-site management
- Custom integrations
- Dedicated success team
- White-label options

BTR Operator Impact

8-12% NOI increase in Year 1

+12%

Net Operating Income

First-year uplift from operational efficiency and retention

+18%

Resident Retention

Higher renewal rates from superior service experience

-32%

Staff time on requests

+24%

Service revenue per unit

-41%

Request response time

+16%

Resident satisfaction score

For a 300-unit BTR building: £180k additional annual NOI from automation alone

Competitive Advantage

Only unified AI infrastructure in market

Feature	SPIDXR	Traditional Concierge	Resident Apps	Building OS

Traction & Pilots

Live deployments starting Q1 2026

Q1 2026

Alpha Launch

- 2 BTR pilot buildings
- 150 units total
- London & Manchester

Q2 2026

Beta Expansion

- 8 additional buildings
- 600 units cumulative
- Co-living integration

Q3-Q4 2026

Scale-Up

- 25 buildings live
- 1,800+ units
- Student housing launch

2027+

Market Leadership

- 100+ buildings
- 8,000+ units
- API marketplace launch

Current status: MVP BUILT. GTM + MARKETING INITIATED WITH HIGH INTEREST OF SERVICE FROM COMMUNITY

Financial Outlook

5-year revenue and deployment projections

Metric	2026	2027	2028	2029	2030
Revenue (£M)	0.8	3.2	8.4	18.6	32.4
Buildings	10	40	105	240	420
Units Under Mgmt	800	3,200	8,400	19,200	33,600

Impact & Sustainability

Building for long-term positive impact

Environmental

- 15-20% reduction in building energy waste through AI-optimized service scheduling
- Paperless operations with digital-first workflows
- Reduced carbon footprint from coordinated deliveries
- Smart resource allocation minimizes waste

Community

- Connects local service providers to buildings at scale
- Creates tech-enabled jobs in property operations
- Reduces social isolation through better building experiences
- Supports small businesses in building ecosystems

Inclusive Design

- Multilingual AI supports diverse resident populations
- Accessibility-first interface design
- Voice and text options for all interactions
- Reduces barriers to essential services

We're building infrastructure that makes urban living more sustainable, connected, and human

Proven *Execution Capability*

MVP built, AI integration logic developed, ready to test & deploy

SPIDXR is led by founders with deep expertise in AI, ML & LLM development, business growth with optimisation & personal service operations — bringing the technical and domain knowledge to execute on this vision

Founder Team

ABDUL AFOLABI
FOUNDER & CEO

*LEADING AI INTEGRATION LOGIC, STRATEGY

DEVELOPMENT AND MEDIA STRATEGY*

Built on Modern Infrastructure

Frontend: FlutterFlow + React

Backend: FastAPI + Firebase

AI Core: OpenAI GPT-4 + Custom Routing Engine
& LLMs

Automation: Make.com + N8N + Zapier API

Data: Firestore + Real-Time Analytics

The Ask: £650K Pre-Seed Round

18-month runway to achieve market validation and Series A readiness

£
650,000

Pre-Seed Round

£3.5M pre-money valuation (SAFE)

Key Terms

Runway: 18 months
Target Close: Q2 2027

Min. Check: £25K
Lead Target: £200K+

INVESTMENT HIGHLIGHTS

- 15.2x LTV:CAC ratio
- First mover in £4.4B UK market
- MVP complete with AI integration
- Path to breakeven by Q3 2027

Use of Funds

- AI Core Development
- Pilot Rollouts
- Product & Engineering
- Sales & Partnerships
- Legal & Compliance

18-Month Milestones

🎯 Months 1-6

Launch pilots in 5 Manchester buildings (1.5K users)

↗️ Months 7-12

Expand to 25 buildings (8K users), achieve £1.7M ARR

📅 Months 13-18

Reach 50-80 buildings, validate economics, prep for Series A

The SPIDXR logo is displayed in a bold, sans-serif font. The letters 'S', 'P', 'I', 'D', 'X', and 'R' are in a light blue color, while the letter 'R' is in a darker blue. The logo is set against a white rectangular background.
