

A nighttime city skyline with several tall buildings. A network of glowing blue dots connected by thin white lines is overlaid on the image, suggesting a digital or AI infrastructure. The text is centered over the image.

SPIDXR

*AI Infrastructure for
personalised intelligent
Living*

The Urban Super-App for Intelligent Living

We're Building the *Neural Network* of Urban Living

*Our vision is to **connect** people, spaces, and services through one autonomous system that **learns** user behaviour to **execute** tasks proactively.*

Life is *Over-Automated*, Yet Undelivered

People have 20+ apps for the same 5 core needs — yet service execution remains manual, disjointed, and unreliable. Buildings still depend on human intermediaries instead of digital intelligence.

The result: decision fatigue, execution failures, and fragmented experiences in the built environment.

78%

of operators still use manual request management

£3.5B

annual UK service transactions lack AI optimization

20+

apps for 5 core needs creates decision fatigue

One **AI** Core. *Infinite* Service Automation.

The unified intelligence layer for the built environment

SPIDXR integrates building systems, human concierge workflows, and local service APIs into one AI decision layer that automates service routing and task execution in real time.

First-of-its-kind infrastructure in the UK market

1

AI Core

LLM decision routing engine with behavior modeling

2

Service API Layer

Integrates local vendors, cleaners, deliveries, and bookings

3

Concierge Console

Real-time human-assisted execution panel for quality assurance

Why Now ? *Perfect Market Convergence*

The PropTech and AI convergence creates a once-in-a-decade opportunity to rebuild urban living infrastructure

✧ AI Maturity

LLM technology now capable of natural language understanding and decision routing at scale

↗ Market Readiness

Post-pandemic acceleration in smart building adoption and automation expectations

⚙ Infrastructure Gap

Fragmented PropTech solutions create demand for unified operating layer

🏆 First Mover Window

No comparable solution exists in UK market — opportunity to establish category leadership

Market Signals

17.8% CAGR

Lifestyle automation growth

£4.4B/year

UK BTR market size

\$110B

Global PropTech by 2030

CBRE PropTech Insights 2025, British Property Federation

AI-Powered Task *Intelligence*

How we **automate** and **optimise** service execution

Predictive Routine Learning

AI learns resident patterns and anticipates needs before requests are made

Schedules weekly cleaning based on usage patterns

LLM-Powered Service Matching

Natural language understanding translates requests into optimal service routing

'I need help moving furniture' → matches to verified movers

Dynamic Vendor Allocation

Smart routing to best-fit providers based on availability, ratings, and specialization

Automatically selects optimal cleaner from network

Priority & Pricing Engine

Optimizes cost and speed dynamically based on urgency and user preferences

Balances same-day premium vs. scheduled standard pricing

Execution Workflow

AI Detection & Routing → Concierge Verification → Task Execution → Resident Feedback → AI Learning Loop

Every execution teaches the system to improve — building a defensible data moat

Substantial UK Market with Global *Potential*

UK PropTech Market Growth

2027 - SPIDXR breakeven target

£4.4B/year

Build-to-Rent annual market

British Property Federation 2025

3.9M units

Managed residential units in UK

Savills Q2 2024

17.8% CAGR

Concierge & lifestyle automation growth

\$110B by 2030

Global PropTech automation market

Targeting initial 1% UK market penetration → £44M opportunity

Multi-Revenue Model with *Exceptional* Unit Economics

Best-in-Class Unit Economics

Multi-Stakeholder Value

Exceptional capital efficiency and scalability.

Why *SPIDXR* Wins: *First* Mover with Defensible Moat

SPIDXR is the first unified *AI* infrastructure for residential *service* automation in the UK, combining proprietary tech, a hybrid model, and *early mover advantage*.

Defensible Advantages

First Mover in UK High

No comparable solution exists, creating an opportunity to define the category and set market standards.

Hybrid AI + Human Model High

Unique reliability layer: automation for efficiency, humans for quality assurance and complex tasks.

Data Moat Growing

Every task execution improves our AI routing engine, creating compounding network effects over time.

MVP Already Built Immediate

A functional MVP with full stack logic and highly designed aesthetic interface for easy navigation.

No direct competitors currently operating in the UK residential sector

Competitive Context

Players: Manual building services

Weakness: No digital layer, not scalable

Players: TaskRabbit, Handy (US-focused)

Weakness: No building integration, consumer-only

Players: Fragmented point solutions

Weakness: No unified AI layer, manual workflows

SPIDXR is the only UK platform combining building OS, AI routing, and human execution with verification.

Phased *Go-to* Market: Building *Intelligence* at Scale

Strategic rollout from premium buildings to global platform

Phase 1 Target Markets

Conservative 5-Year Financial Projections

Path to profitability by Q3 2027

Year	Buildings	Users	Revenue (£M)	EBITDA Margin	ARR Growth
2025	5	1.5K	£0.4M	-12%	—
2026	25	8K	£1.7M	8%	+325%
2027	80	26K	£4.5M	26%	+165%
2028	180	56K	£10.2M	34%	+127%
2029	320	100K	£17.3M	39%	+69%

2027 highlighted - Breakeven year target

£144K

ARR per Tower

Avg. annual recurring revenue per building

78%

Gross Margin

Software-like margins with service execution

Q3 2027

Breakeven Point

~120 towers, 26K users

Key Assumptions

- Avg. £12K-£18K annual contract/building
- 8-12% transaction fees on routed services
- Conservative churn: <2.5%/month
- CAC at £38 through partnerships

Proven *Execution Capability*

MVP built, AI integration logic developed, ready to test & deploy

SPIDXR is led by founders with deep expertise in AI, ML & LLM development, business growth with optimisation & personal service operations — bringing the technical and domain knowledge to execute on this vision

Founder Team

Built on Modern Infrastructure

Frontend: FlutterFlow + React

Backend: FastAPI + Firebase

AI Core: OpenAI GPT-4 + Custom Routing Engine
& LLMs

Automation: Make.com + N8N + Zapier API

Data: Firestore + Real-Time Analytics

The Ask: £650K Pre-Seed Round

18-month runway to achieve market validation and Series A readiness

£
650,000

Pre-Seed Round

£3.5M pre-money valuation (SAFE)

Key Terms

Runway: 18 months
Target Close: Q2 2025

Min. Check: £25K
Lead Target: £200K+

INVESTMENT HIGHLIGHTS

- 15.2x LTV:CAC ratio
- First mover in £4.4B UK market
- MVP complete with AI integration
- Path to breakeven by Q3 2027

Use of Funds

- AI Core Development
- Pilot Rollouts
- Product & Engineering
- Sales & Partnerships
- Legal & Compliance

18-Month Milestones

🎯 **Months 1-6**
Launch pilots in 5 Manchester buildings (1.5K users)

📈 **Months 7-12**
Expand to 25 buildings (8K users), achieve £1.7M ARR

🏆 **Months 13-18**
Reach 50-80 buildings, validate economics, prep for Series A

SPIDXR

The *Intelligence* Layer for *Modern Life*

Engineering the foundation of lifestyle automation from
smart buildings to *smart cities*

First-mover in £4.4B UK market
